

24 May 2017

**To whom it may concern,**

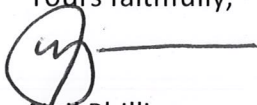

Dear Sir,

I can confirm that Wreckers Dismantling (Cape) was appointed by Enstra Paper Mill to perform the demolition of the entire Pulp Plant situated at the Enstra Mill in East Geduld Road, Springs on 01 April 2016.

Demolition activities included the removal of various steel and concrete structures, redundant piping and conveying systems, redundant buildings, three water tube boilers and associated structures, storage tanks and Digesters. They also performed controlled explosions on numerous large concrete tank bases and silos. A portion of the demolition work entailed the removal of redundant equipment and structures within an operating section of the plant and they did so with minimum interruptions.

It was indeed a pleasure working with Wreckers as the team required minimal management and the Wreckers team is highly experienced and I would certainly make use of their services in the future.

Yours faithfully,

Neil Phillips  
Project Engineer  
Enstra Paper.
